

docker in 20+ minutes

What is Docker?

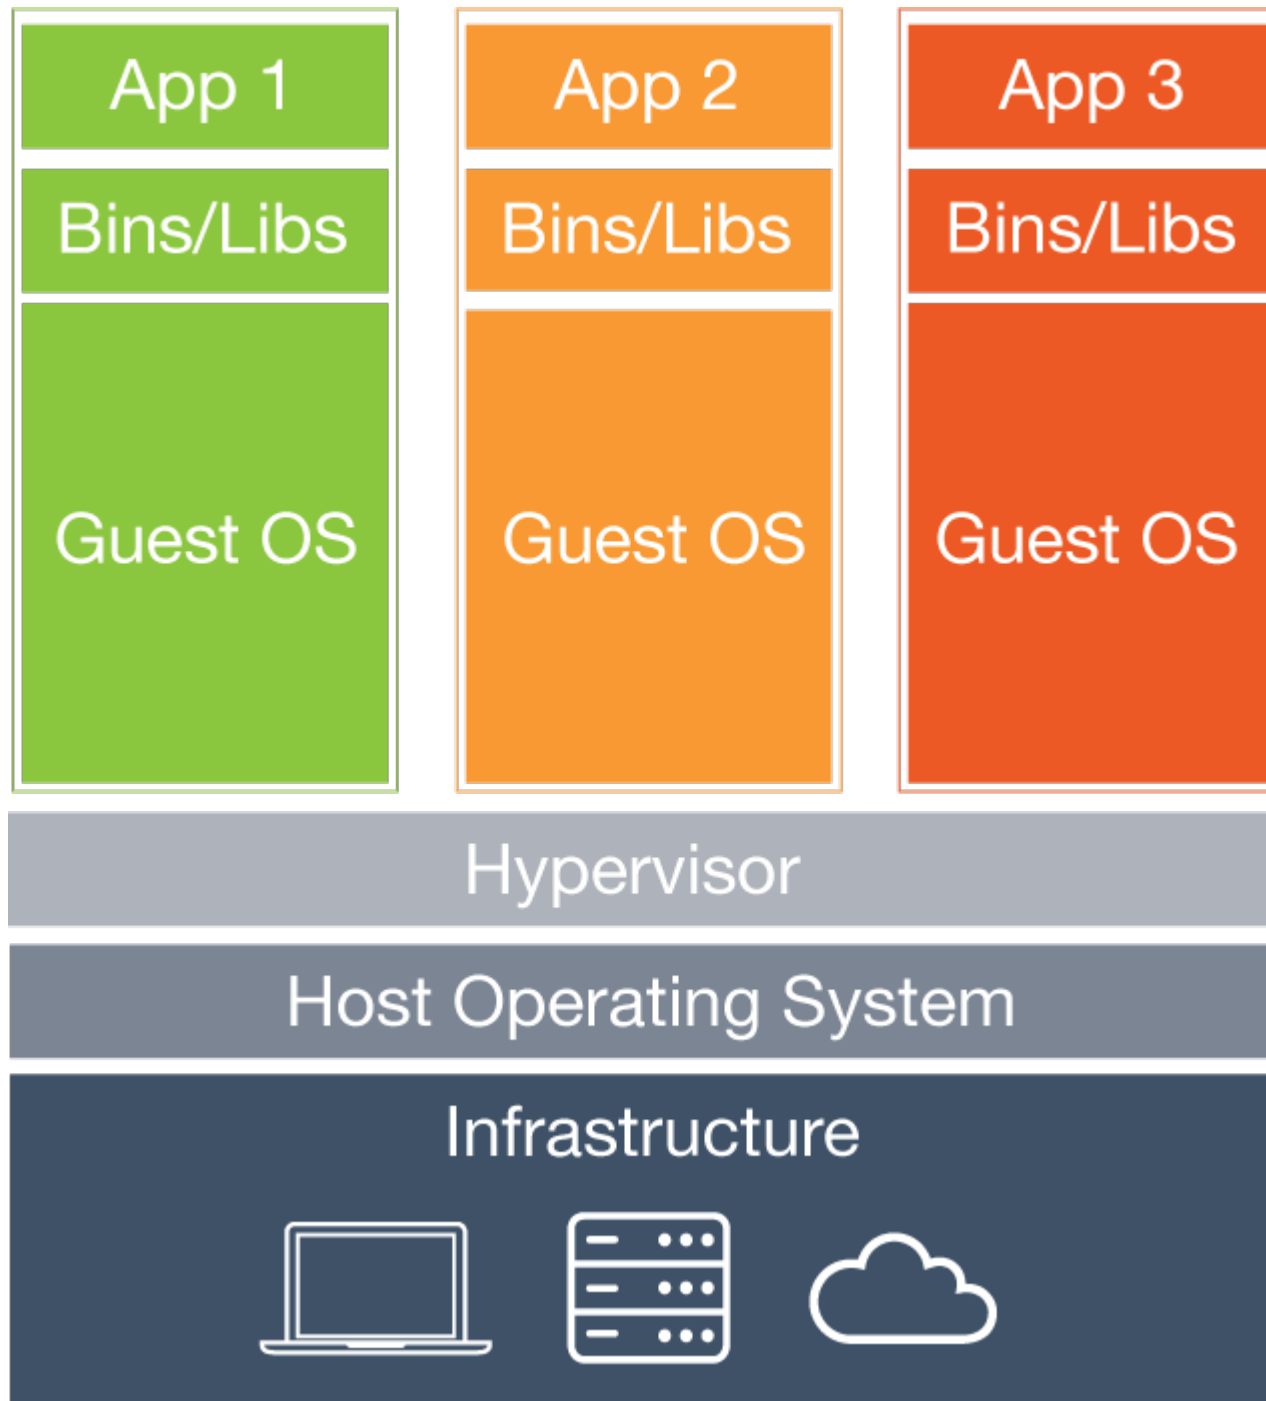

Build

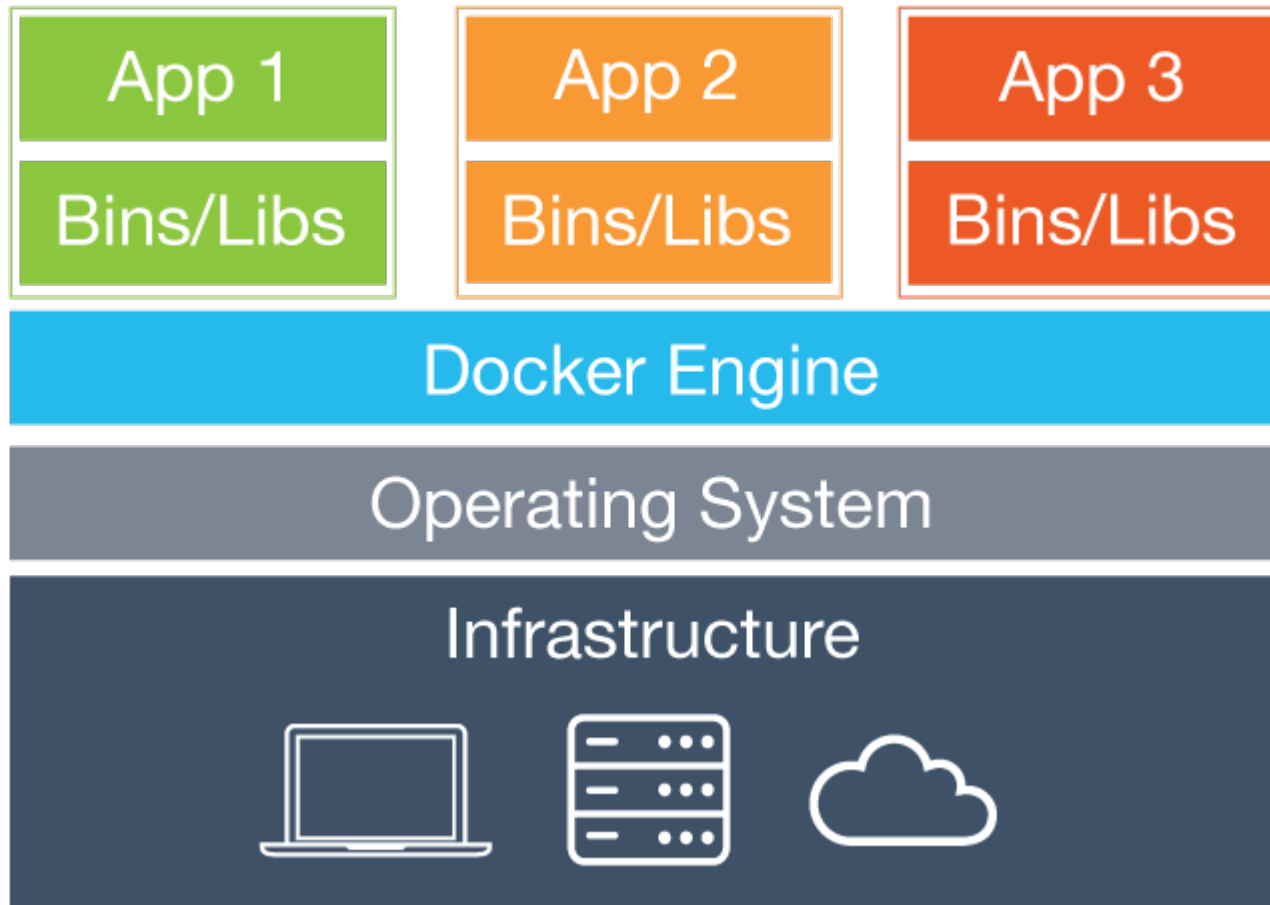

Build
Ship

Build
Ship
Run

So what?

Virtual Machine vs Container

Business Value

Run your application anywhere

Server optimisation and density

Running more stuff on one server

Cost

Increase the speed and reliability of
product delivery

What does that have to do with R?

Demo

Still, so what?

Stream processing

Stream processing

stream of hotel booking events

Stream processing

room booked

Stream processing

room booking cancelled

Stream processing

room booking confirmed

Stream processing

room booking declined

Scalable stream processing

Thank you!
